Stage 2 Technical Test

Task:

The small web system needs to be developed which will include HTML,
CSS, JAVASCRIPT (JQUERY), Any server side language like Python, PHP and databases like
MYSQL.

Task Detail:

The web system where customers can register with the registration form. After registration they
will see the page with the google map showing restaurants near current location. You have to
maintain the session as any website does with login and logout functionality. The registration
form must use captcha to avoid the spam registration.

Time Required:

1 Week

Must Have:

1. The design should be mobile responsive.
2. The code should not be copy paste.
3. You must not use any framework.
4. You must use an object oriented approach when you are coding.
5. The database structure must have one to many relations.

Note:

The purpose of this task is to know how you approach any future projects as an individual. You
can show this system by sharing a screen on the technical interview day or if you can deploy to
any server it would be the plus point. Feel free to ask any questions on the above email address
and you can send the zip version code to the above email address as well.
